

# Let's enjoy the rich nature on Hatoma Island!

You can feel how big the ocean is at Tachibaru Beach, Shimanaka Beach and Funabaru Beach.

Mice are cute, but they come into the houses and make holes and bite food. The number of mice has been increasing day by day.

We have many coconut crabs. They are very strong and big. People say they are yummy so Hatoma Island is famous for its coconut crabs.

I recommend snorkeling, swimming and playing at Yarabeach, Maenobeach and The beach in front of the school.

Sea turtle: Sometimes you can see sea turtles from the port and shore. They swim slowly but sometimes swim so fast.

The old samurai's house: This is a ruins that used to be used to monitor and attack ships in the sea.

You can take starsand on Fukabaka Beach. I recommend that you go there when the tide is low.

Yaeyama big bats eat papayas and bananas, that's why we call them fruit bat. They are big and cool, but their faces are so cute.

There are a lot of goats, and they come to school, and the baby goats and black goats are very cute. The number of goats will increase from November to December.

Goat: You can enjoy various foods like Yaeyama soba and taco rice. They also offer a daily lunch. I recommend the breakfast menu.

My favorite beach is beach in front of the school because beautiful view and you can fishing there.

Clownfish live in anemones, where they hide. There are some places around here where you can see them.
